DETAILED ACTION

*Response to Amendment*

1. The amendment filed on 08/02/2004 has been entered and made of record.

*Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 7-8,10,12-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Aoshima et al (US 6.631,014).

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Considering claim 7, which is representative of claim 12, Aoshima discloses an image reading apparatus comprising: a scanning member 3, movable along an original mounting table, that includes a reading element for reading an original image (Fig 1); a frame member 1 having a rib housing said scanning member; a control board 14,15 for

Art Unit: 2622

controlling said scanning member; and an interface connector (Fig 1) connected to a signal line of an external apparatus, and mounted on a side of said control board 14,15 , wherein said control board 15,15 is secured to said frame member 1 at least one side on which said interface connector is not mounted (Col 1 Lines 6-12), and wherein said control board 14,15 is secured to said rib of said frame member (Fig 2; Col 4 Lines 46-54).

Regarding claim 8, which is representative of claim 13, Aoshima teaches further comprising a conductive board cover covering said control board (Col 5 Lines 58-Col 6 Lines 5).

Considering claim 10, Aoshima teaches wherein at least one side of said control board, which is not secured to said rib, is secured by a screw to said frame member (Fig 1; Col 4 Lines 49-62).

#### *Conclusion*
